Work History

eProductivity Software

July 2025 – Present

Software Engineer Intern

Bangalore, Karnataka

- Engineered **enterprise API integrations** connecting **Microsoft Dynamics 365** with **CorrFusion**, enabling reliable transactional data exchange across heterogeneous systems; validated **5+ business-critical workflows** improving processing efficiency by **10%**.
- Implemented **server-side business logic** for cost estimation workflows in **CBS**; validated **10+ complex scenarios** ensuring correctness of financial calculations under varying input conditions; tracked **operational metrics** to surface bottlenecks and drive workflow reliability.
- Participated in **code reviews** and first-principles design discussions with senior engineers, reasoning about **reliability, scalability, and correctness** of production workflows in a cloud-connected, high-availability environment.

Projects

Split Payment Settlement System | *Java, Spring Boot, PostgreSQL, RESTful APIs*

- Architected a **payment orchestration backend** with **ACID-compliant ledger entries** on **PostgreSQL** and **automatic rollback**, reducing reconciliation errors by **70%**.
- Exposed **RESTful APIs** with end-to-end integration test coverage across multi-party settlement workflows; drove **test automation metrics** through unit and functional test suites.

Badminton Coaching & Player Development System | *Java, SpringBoot, Angular, MySQL, Amazon S3*

- Deployed a **full-stack academy platform** serving **200+ active students** with enrollment, scheduling, and skill tracking; iterated features based on **user feedback** to improve adoption.
- Developed **Spring Boot RESTful APIs** with **MySQL** schema for coach dashboards; integrated **Amazon S3** for media and document storage.

Real-Time Vehicle Security System with ETL Pipeline | *Python, Flask, Kafka, MongoDB, scikit-learn, React.js*

- Developed a **distributed security platform** processing **1000+ CAN messages/sec** with **RSA-2048/HMAC-SHA256** verification, achieving **99.7% attack detection rate**; used **telemetry metrics** to tune reliability thresholds.
- Designed a **custom ETL pipeline** with **Apache Kafka** streaming and **Python threading**, cutting **MongoDB writes** by **80%**; implemented **Isolation Forest** anomaly detection at **sub-100ms latency**.

Accident Prone Zone Detection & Alert | *Java, Android Studio, Google Maps API, DynamoDB (AWS)*

- Created a **real-time Android app** querying large-scale **GPS data** from **AWS DynamoDB**, delivering proximity alerts within 250m at **sub-100ms latency**.

Technical Skills

Languages: C#, Java, Python

Frameworks & Backend: .NET, Spring Boot, Angular, RESTful APIs

Architecture & Concepts: Microservices, Distributed Systems, System Design, Database Design, DSA

Databases: PostgreSQL, MySQL, DynamoDB (AWS NoSQL)

Cloud & DevOps: AWS (DynamoDB, S3, Cloud Practitioner – In Progress), Salesforce Platform (Trailhead), CI/CD, Git

Education

Sri Ramakrishna Engineering College

Coimbatore, Tamilnadu

B.Tech Information Technology (2022 – 2026)

GPA – 10.0

Achievements & Certifications

- Salesforce Trailhead – Agentblazer** – Earned **22,200+ points** (Mountaineer rank); actively progressing through AI, CRM, and platform trails toward Expeditioner rank.
- AWS Cloud Practitioner** – Certification in progress via Udemy; covers core AWS services and cloud architecture.
- JPMorgan Chase & Co.** – Completed **Virtual Internship (Job Simulation)** focused on financial technology and data feeds. [\[Link\]](#)
- Agentic AI Course** – Completed AI Engineer Agentic Track course on Udemy. [\[Link\]](#)

Position of Responsibilities

Interact Club

2025 – Present

Secretary

- * Coordinated club activities, managed member communication, and supported event planning to drive student engagement.

Grievances Cell

2024 – Present

Representative – Department of Information Technology

- * Acted as **liaison** between students and faculty, communicating concerns and assisting in timely resolution of grievances.
